

Sunshine Cuts and Cleaning

Taylor Jovi
@taylorljovi

Description

A website where we can promote what we do as lawn company. Why you can trust us and see we are reliable. As well as get ahold of us and submit a request a quote form.

Features

- Navigation bar with a drop down
- Top of the page button
- Linked to firebase data base

Planning - User Stories

On this website the user can see photos of jobs we have done, click links to our facebook and request a quote form. They will be able to fill out a request a quote form and it will get sent to us for us to reach out to them for a job.

Planning - Database

My database is pretty basic it is really for us to do the checking to see who has entered in information. I do plan to have the request a quote form emailed directly to us instead of going and getting put into a database.

Technology Stack

- JavaScript
- React
- Visual Studio Code
- Firebase Database
- Firebase to deploy

Demo

What I Learned

- I had to go back and relearn Javascript and picked up a new framework of React.
- New technique of using firebase and getting to use all of its awesome features.
- The drop down menu as well as the top of the page button.

What's Next

- I plan on Deploying and making this website active.
- Making the request a quote form sent directly to our email instead of a database
- Clean up the pages a bit more and add some other cool features(ex. Maybe a calendar where you can select dates you would like mowing, more mowing option.)
- Learning something else new!
